

Yasir A. Malik

Doctoral Candidate (DBA) · Auditing, Behavioural Accounting & AI Governance

Newark, New Jersey · YasirAMalik@gmail.com · +1 (786) 704-8536 · linkedin.com/in/yasiramalik

Research Interests

Cognitive bias in professional judgment · anchoring and adjustment in recurring audit engagements · automation bias and human–AI interaction in assurance work · survey methodology and access to specialist professional populations · AI governance frameworks (NIST AI RMF, SR 26-2).

Education

Doctor of Business Administration (DBA) — Florida International University, College of Business

Cohort 8.14 · *In progress* · **Qualifying examination passed, July 2026**

Dissertation in development: *Anchoring Bias in LLM-Assisted Audit Judgment* — how AI-assisted review reshapes auditor judgment.

Major Professor: Dr. Miguel Aguirre-Urreta · Qualifying-study supervisor: Dr. Juan C. Rey

Master of Business Administration (MBA) — Florida International University, October 2011

Certified MBA: Marketing, Accounting and Financial Analysis (100%)

Graduate Advanced Diploma, International Banking — Florida International University, August 2007

B.Sc. (Honours), Banking and Finance — The London School of Economics and Political Science, June 2005

Merit Scholarship, University of London, 2002–2005

Regulatory Studies — Introduction to Bank Examinations — FDIC Corporate University, Arlington VA, March 2012

Research

Qualifying study (completed and passed, July 2026)

Mitigating Anchoring Bias in Long-Term Auditor Engagements. An eleven-construct, fifty-five-item measurement model with sixteen hypotheses, grounded in dual-process theory and the anchoring-and-adjustment heuristic. Eight organisational interventions operating through two mediating mechanisms — audit judgment quality and audit process rigour — toward one outcome: judgments driven by current evidence rather than the prior-period figure.

IRB-approved (IRB-25-0462). Instrument developed, pilot-tested, and fielded. Complete analytic protocol specified from exploratory factor analysis through confirmatory factor analysis, regression diagnostics, and structural modelling. Manuscript ~16,000 words.

Outcome and contribution. The study reached feasibility rather than validation. Applying the eligibility criteria to a commercial research panel of 334,976 participants returned approximately twenty eligible individuals — a prevalence near six per hundred thousand. Compensation and instrument design were both ruled out: effective compensation ran

well above typical academic-survey rates, attention-check failures among eligible respondents were zero, and every usable respondent produced substantive open-text material. The constraint was arithmetic, and it was observable on the platform's configuration screen before funds were committed.

Faculty assessment: *"Rather than simply acknowledging the limitation, you developed well-supported recommendations for future research... This type of critical self-evaluation demonstrates sound research judgment."* — Dr. Juan C. Rey, FIU College of Business.

Manuscripts in preparation

"Six in One Hundred Thousand: Why Specialist Professional Populations Cannot Be Recruited from General Research Panels." Research note, ~3,400 words. Argues that panel size is near-uninformative for specialist populations; the operative quantity is eligible prevalence under the study's own screeners, and it is observable in advance at no cost. Proposes a pre-fielding prevalence check. *Draft complete; venue selection in progress.*

Research instruments and open materials

Feasibility calculator. The argument in the research note above, built as a working instrument rather than left as an anecdote. Reachable usable sample is modelled as a product of frame size, eligible prevalence, response rate and screen survival. It is validated by reproducing the study that produced it, and it shows that a survey at this prevalence would have needed a sampling frame near 9.6 million. Python, plain standard library, versioned and public.

Phenomenological protocol for the qualitative arm. A complete design written before any data exists: criterion sampling, interview guide, coding plan from horizontalisation through to composite description, trustworthiness criteria mapped to procedures rather than to definitions, and an append-only audit trail. Falsification conditions are stated in advance. *Nothing has been fielded. Zero participants. The ethics modification has not been submitted.*

Model-agnostic research runbooks. A capture schema with provenance on every row, a rule that a source stays a lead until it has been read in full, and an adversarial pass run against the pipeline's own output. Built in plain markdown so the repository is the memory and the model is replaceable.

Research programme in development

The dissertation extends the validated human-side model into AI-assisted review through a three-link causal chain: system output becomes the anchor, arriving before the reviewer forms an independent view; the model confirms rather than challenges the position already stated; and successive models reprocessing the same work converge on one another rather than on evidence. The governance consequence is that recurring professional judgment can degrade while every individual model passes its own validation.

The empirical contribution targets the weakest link — whether professionals reading model output converge on each other — which is measurable and, to date, unmeasured.

The chain is argued link by link rather than asserted, and each link carries its strongest challenge in writing: the first must be argued from expert-population evidence rather than undergraduate lab samples; the second describes current model behaviour and so is argued as a mechanism, the pressure to optimise on human approval, rather than as a property of any one model generation; and the third is stated plainly as an inference rather than a finding. Nothing in the chain has been tested, and the programme says so wherever it is presented.

Methods

Quantitative. Survey design and instrument validation · exploratory and confirmatory factor analysis · reliability analysis · PLS-SEM (specified) · regression diagnostics · sensitivity analysis across a parameter space · Jamovi,

SPSS, Python (pandas, factor_analyzer), Qualtrics.

Qualitative. Phenomenological design · criterion sampling and saturation as a stopping rule · semi-structured protocol development and pilot testing · horizontalisation, meaning units, textural and structural description · trustworthiness criteria mapped to procedure · reflexive memoing and an append-only audit trail · NVivo.

Research governance. Protocol approval and amendment tracking · participant protection · institutional AI-use policy compliance and disclosure · reproducible pipelines in version control.

Teaching and Instructional Experience

Florida International University — graduate appointments, 2010–2011

State Farm Financial Literacy Lab — Lab Assistant

College of Business. Delivered financial-literacy instruction and lab-based support, working with participants on applied markets and personal-finance content. The lab was endowed by State Farm in 2010; FIU's College of Business now runs the programme as the Capital Markets Lab.

Student-Athlete Academic Center (SAAC) — Resident Tutor, Corporate Finance and Accounting

Paid tutoring appointment supporting student-athletes in corporate finance and accounting. Managed scheduled appointments, availability, and post-session reporting through the GradesFirst academic support platform; maintained per-course teaching assignments and documented session outcomes for academic advisors.

Student Managed Investment Fund (SMIF) — Sector Manager

Directed sector research and allocation within the student-managed fund.

Instructional support — FIN 6644, International Financial Markets

Course materials retained from this period include the 2011 syllabus, sequential lecture note sets, case question sets, assignment solution keys (interest-rate parity, triangular arbitrage), and comprehensive final examination sets — consistent with instructional-support responsibilities rather than enrolment alone.

Prepared to teach

Auditing (external and internal) · Accounting Information Systems · Internal Controls and SOX ·

Enterprise Risk Management · Behavioural Accounting and Judgment & Decision-Making · International Financial Markets · AI Governance and Responsible AI in Business · Data Analytics for Accountants.

Professional instruction

Staff training, supervision, and judgment coaching across two global banks, 2012 to date — workpaper review, methodology instruction, and structured feedback on judgment quality. Regular presenter to senior management and banking regulators, translating technical audit and AI material for non-specialist audiences.

Academic Service and Leadership

- **President, Pakistani Student Association (PakSA)**, Florida International University, 2010
- **FIU Ignite — 100% Graduate Assistantship**, 2011 (competitive award)

Professional Experience

JPMorgan Chase & Co. — New York, NY, 2015 to June 2021

Program Manager, CIB Resolution and Recovery Planning — coordinated 50+ stakeholders across annual Dodd-Frank resolution-plan submissions to the Federal Reserve and FDIC. Senior Associate, Corporate Finance Reporting — firmwide risk reporting; Basel III RWA and capital adequacy; FR Y-14Q, FFIEC 101, Pillar 3; identified \$180M in capital optimisation.

Citigroup Inc. — Tampa, FL and New York, NY, 2012–2015, and July 2021 to April 2026

Assistant Vice President, Global Legal Entity Management, Office of the Chief Accounting Officer; Senior Consultant, U.S. Regulatory Reporting. Later VP Audit Manager — thematic audits across 15+ business units with reporting to the Board Audit Committee; designed and deployed a retrieval-augmented AI review assistant that reduced review cycle time by approximately 35%; authored an AI governance framework proposal referencing the NIST AI Risk Management Framework and SR 11-7 (since superseded by SR 26-2).

Florida Office of Financial Regulation — West Palm Beach, FL, 2011–2012

Bank Examiner, Bureau of Bank Regulation (District II). Safety-and-soundness examinations of state-chartered community banks with up to \$3B in total assets, conducted on a **joint and alternating basis with the Federal Deposit Insurance Corporation and the Federal Reserve Bank of Atlanta** under the federal–state supervisory programme. Assigned CAMELS component and composite ratings; assessed credit risk in the loan portfolio, interest-rate sensitivity, liquidity, and the adequacy of board-approved policies; presented findings to boards of directors and senior management and negotiated corrective programmes. Prepared and exchanged confidential supervisory reports with federal counterparts. Trained at **FDIC Corporate University** (*Introduction to Bank Examinations*, 2012).

Systemax Inc. (NYSE: SYX) — Miami, FL, 2010–2011 · MBA Intern, promoted to Analyst

Royal Bank of Scotland — Dubai, January 2008 to June 2009 · Senior Business Analyst, Retail Credit Risk (full-time) — credit-risk MIS for a \$500M+ retail portfolio through the 2008 crisis.

Certifications

FDIC Bank Examiner I · Registered Scrum Master · CITI Program — Social/Behavioural Human Subjects Research
