Re: Audience and Revenue Lead, Ecosystem Investments

Dear Hiring Team,

Your 2027 focus areas are to strengthen AI skills, enable responsible AI, and unlock audience trends for news organisations. I have done the first two for a professional community that was nervous about AI, and I have measured an audience from reach to response. I would like to bring that to Global News Programs.

I will be direct about the gap. I have not worked in news publishing. My career has been in banking, regulation and audit. If media-industry experience is the binding requirement, this letter will not change that, and I understand.

What transfers is the job you describe, done in a different industry. At Citi I led AI adoption for a community of auditors, professionals whose work, like a journalist's, depends on judgment and on being able to defend what they publish. I defined the AI tooling roadmap, gathered requirements from the people who would use it, built and shipped the tool myself in Python and LangChain, and coached them through adopting it, iterating on their feedback until it cut their review cycle by roughly **35%**. Then I wrote the Responsible AI framework it ran under, so the adoption could be defended. That is the arc of your role: teach the tools, make them safe to use, and feed what users say back to the product team.

I run programs with partners outside my own organisation. At JPMorgan Chase I managed Resolution & Recovery Planning across **50+ stakeholders** in five functions, none reporting to me, and delivered it to two federal regulators on fixed deadlines. I have managed budgets, prioritised concurrent workstreams against the resources available, and presented the results to executives.

I work with audience data. In my doctoral research at FIU I designed a survey instrument, fielded it through a research panel of **334,976**, and measured the funnel from reach to eligible response. It taught me more about why audiences do not convert than any dashboard. The research question itself is how professionals use AI without surrendering their judgment, which is the question every newsroom adopting AI is now asking.

I would bring an outsider's discipline to News Consumer Insights and a practitioner's patience to the training workshops. I would welcome a conversation.

Sincerely,

Yasir A. Malik
