Office of Transformation

Goldman Sachs

200 West Street, New York, NY 10282

Re: Office of Transformation, Digital Transformation Project Manager — AI-Driven Strategic Initiatives, Vice President, New York

Dear Hiring Team,

The posting promises programs that deliver "revenue, risk and control, and efficiency outcomes." I can price all three, because I have delivered them: **\$180M** in capital optimization identified for CFO decision support at JPMorgan Chase; consent-order remediation across **15+ business units** at Citi with closure evidence external regulators accepted; and two automation programs that took **~40%** out of manual reconciliation review and **~35%** out of audit review cycle time.

The program spine. At JPMorgan I ran **Resolution & Recovery Planning** across **50+ stakeholders** in Legal, Treasury, and Operations — scope, dependencies, working groups, issue tracking, escalation — into Federal Reserve and FDIC submissions against statutory deadlines. Before that I was **Program Manager for CIB Resolution & Recovery Planning**, coordinating regulatory deliverables across legal entities, controllers, and Treasury. Multiple interdependent workstreams, one immovable date, and stakeholders who did not report to me: that is the job this posting describes, and it is the job I have held.

The AI half is built, not borrowed. The role asks for target-state operating models "that reflect an AI-enabled environment." I authored one: an AI governance framework for Citi Internal Audit — use-case intake, risk tiering, a control library, and post-deployment monitoring KPIs, referenced to NIST AI RMF and SR 11-7. Then I elicited the requirements, wrote the code, and put the tooling into production — a retrieval-augmented workpaper assistant in Python and LangChain that cut review cycle time **~35%**. I know what an AI-enabled operating model costs to run because I have run one, and I know where the controls have to sit because I designed those too.

Why the risk-and-control background is the advantage, not a detour. Most project managers on an AI transformation program have to learn the risk and control half on the job — which is the half that stalls these programs when a control owner or a regulator asks a question nobody planned for. I started as a **bank examiner** with the Florida Office of Financial Regulation, ran examinations alongside federal banking regulators, and have spent the years since on the other side of that table. I can anticipate the challenge and design the answer into the plan rather than discovering it at a steering committee.

One thing worth flagging. The posting lists the division as Office of Regulatory Relations while the overview describes the Office of Transformation business unit. If that means this program sits close to the firm's regulatory agenda, my background is unusually well-matched, and I would be glad to have that conversation. If it is a posting artifact, nothing above changes.

The honest gaps. I have not worked at Goldman Sachs, and I hold a Registered Scrum Master rather than a PMP. My program experience is regulatory, capital, and audit transformation rather than revenue-side product delivery — I would rather state the shape of it plainly than let a title imply something broader.

I am in Newark; 200 West Street is a direct commute. I would welcome the conversation.

Sincerely,

Yasir A. Malik
