

The average hides the answer. The worst country decides it.

10 to 15 minutes · opening 10%, body 80%, close 10%

1	TITLE	HOOK
0:00	"I screened 334,976 people." PAUSE TWO SECONDS. "I got four."	
2	THE TOPIC	
0:25	General population = fieldwork problem. Rare population = arithmetic.	
3	GAP + QUESTION	SIGNPOST
1:15	Read the question off the slide. Land: parameter, not limitation.	
4	THE MODEL	
1:55	Four terms, four levels. Product, not a sum. Free on the interface.	
5	BINDING FRAME	ASK
3:10	ASK THE ROOM: who has read a paper with one overall response rate?	
6	FIVE HYPOTHESES	
4:40	Name them, do not read them. Four papers, one argument.	
7	H1	
5:20	Spain AND China. A conjunction. Breadth is fragility, not ambition.	
8	H2 AND H3	
6:10	320 of 380. A panel is a firm and its product is entirely downstream.	
9	H4 AND H5	SIGNPOST
7:10	Harzing 47% by phone. Zeng is mine-vs-theirs: say which is which.	
10	DATA SOURCES	
8:00	Audience interface, free, before commitment. Say the no-data line aloud.	
11	MEASURES	SCORED
8:45	Walk the table. DV, then H2 to H5, then controls. Do not wave.	
12	METHOD	
9:30	Analytic vs inferential. No p-value on H1, and say why not.	
13	TIMEFRAME	SIGNPOST
10:15	Nine months. Notice what is missing: there is no recruitment step.	
14	MY EVIDENCE	SLOW
10:45	334,976 to 20 to 4. Then say what it CANNOT do. H1 yes, H2 no, H4 weak.	
15	LIMITS	
11:40	"I would rather state the limits than be handed them." Four of them.	
16	CLOSE	STOP
12:20	Parameter before. Limitation after. Then STOP. "Thank you. Questions."	

THE FOUR PHRASES

- Parameter before a design. Limitation after it fails.
- A comparison is a conjunction, not an average.
- Priced by the weakest frame, not the average one.
- A panel's whole product is a downstream asset.

THE NUMBERS, IN ORDER

- 334,976 screened · 20 eligible · 4 usable
- 6 per hundred thousand
- 320 of 380 home-region · 80.3% of sales · 9 global
- 18.8M to 72.2M panel · mean only 15.4 to 9.2%

DO NOT

- Read the slides.
- Apologise for being nervous.
- Rush the numbers. Pause after 334,976.
- Trail off. End on the sentence, then stop.

THE THREE THAT HURT, AND THE ANSWER

"You failed to collect data. Why trust a design from you?"

Because the failure is the finding. I had a complete protocol and nothing to run it on, and the reason was visible before I fielded. This project exists so the next person sees it too.

"Isn't this just a methods paper?"

The dependent variable is cross-national. Which countries can be reached, and why coverage differs. H2 is what makes it international business.

"Is the triad the right way to cut region?"

That is what I am least sure about. Fainshmidt's seven institutional types may predict coverage better. I would rather raise the doubt than quietly revise after the deadline.

If a question goes somewhere you have not been: "That is the part I am least sure about" is a real answer, and it scores better than a guess.
