Hiring Team — Internal Audit, Corporate Sector

JPMorgan Chase

545 Washington Boulevard, Jersey City, NJ 07310

Re: Audit Manager (Job ID 210755008)

Dear Hiring Team,

I am applying for the Audit Manager role in Jersey City. I spent six years at JPMC (Mar 2015 – Jun 2021), most recently leading **CCAR** forecast validation and qualitative model challenge over a **\$2.6T** balance sheet under **SR 15-18**, and before that owning **Basel III** RWA for a **\$50B** portfolio of equities, fixed income, and OTC derivatives. I would like to return.

The audit-leadership requirement, demonstrated. At Citi for the past five years I led global and regional audit engagements end-to-end across 15+ business units — evaluating and challenging the adequacy of control design and operating effectiveness across integrated business and technology risks, finalizing findings, issuing opinions on the control environment, and managing audit team members through reviews and feedback. I worked directly with Federal Reserve examiners on consent-order audit execution and sustainable-closure validation, and identified the continuous-audit and automation opportunities the JD asks for.

The Alteryx + Python + LLM line is mine. Most candidates for an Audit Manager role can list "data analytics" as a skill. I shipped the system: a **RAG-based Workpaper Quality Assistant** built on Python and LangChain, integrated with Alteryx workflows, with SHAP/LIME explainability and prompt-injection guardrails — the kind of LLM-enabled audit tooling the JD calls out by name. Audit cycle time fell ~35%. The tool is itself auditable, which matters when an Internal Audit function deploys AI.

An honest framing of the lateral. My regulatory pedigree is bank-side — Federal Reserve, FDIC, Basel III, CCAR, SR 11-7 — not Asset & Wealth Management. The AWM-specific regulations the JD names (12 CFR 9, ERISA, Investment Company Act, Investment Advisors Act, SFDR) and the AWM product set (mutual funds, ETFs, money market funds, SMAs, alternatives) are ramp territory rather than direct résumé experience. What transfers cleanly is the audit instinct: how to evaluate control design and operating effectiveness in regulated, complex, multi-product environments; how to manage an engagement; how to engage with examiners. The reg vocabulary I can learn on a defined timeline.

I'd welcome a conversation. The attached résumé maps the experience against the JD's seven-year skill requirements.

Sincerely,

Yasir A. Malik
