Global Banking & Markets — Supervisory Risk & Controls

Goldman Sachs

200 West Street, New York, NY 10282

Re: Global Banking & Markets, Supervisory Risk & Controls, New York, Vice President (Req 183007)

Dear Hiring Team,

I am applying for the Supervisory Risk & Controls Vice President role covering the Capital Solutions Group. The posting asks for someone to develop a supervisory framework for a business activity — the desk controls, the supervisor's expectations, the escalation path, the monitoring — and then represent it in governance forums as first-line evidence that the business is watching itself. That is the job I did at JPMorgan Chase as **Risk Control Manager for Treasury & CIO**, and it is the job I examined from the other side of the table before that.

Building the framework, not inheriting one. At JPMorgan I owned the first-line control framework for Treasury & CIO capital activities: defined the controls and what a supervisor was expected to see, set the escalation path, and then built the monitoring — automated capital and liquidity reconciliations that cut manual review ~40% and removed a recurring source of reporting error. I ran **Resolution & Recovery Planning** across 50+ stakeholders in Legal, Treasury, and Operations into Federal Reserve and FDIC submissions, and led **CCAR** forecast validation over a **\$2.6T** balance sheet under SR 15-18. The stakeholder set the posting names — bankers, Compliance, Engineering, Legal — is the set I coordinated to deadlines that did not move.

Regulatory implementation from three angles. I began as a **bank examiner with the Florida Office of Financial Regulation**, running CAMELS safety-and-soundness examinations alongside federal banking regulators, so I know what a supervisory control looks like when it is being tested rather than described. For the past five years at Citi I led **consent-order** audit execution across 15+ business units, assessing whether first-line supervisory controls were designed and operating as the regulator expected, and authoring issue-closure evidence that external regulators accepted. Examiner, first-line owner, auditor: the same control, from every seat.

Monitoring and tools. The posting pairs controls with "related supervisory tools." I build those rather than commission them — at Citi a retrieval-augmented monitoring assistant in Python and LangChain that cut review cycle time ~35%, built so the tool itself was auditable. My doctoral research at FIU (DBA, expected 2028) is on how expert judgment degrades when a machine answers first, which is the failure mode of a supervisory control that has quietly become a checkbox.

The honest gap. I have not worked inside a Capital Solutions or private-financing desk, and I have not been at Goldman Sachs. The CSG product set is ramp. What transfers without adjustment is the method the posting describes in its own first bullet: develop an understanding of the business activity, then define the controls — I have done that in Treasury, in capital reporting, and across 15 business units, and it does not change with the product.

I am in Newark; 200 West Street is a direct commute. I would welcome the conversation.

Sincerely,

Yasir A. Malik
