Hiring Team — Control Management, Corporate Sector

JPMorgan Chase

Jersey City, NJ

Re: Control Management — Vice President, Program Manager, Innovation & AI Transformation

Dear Hiring Team,

I am applying for the Innovation & AI Transformation Program Manager role in Control Management. This role sits at the exact intersection I have worked for the last five years: **first-line and second-line control design for AI adoption inside a G-SIB** — and I would like to bring that back to JPMorgan, where I spent six years (2015–2021) in Treasury/CIO risk and control and CIB capital roles.

Control management, demonstrated at scale. At Citi (2021–2026, VP Audit Manager) I evaluated and challenged control design and operating effectiveness across 15+ business units, led consent-order issue validation with evidence accepted by Federal Reserve examiners, and reported to senior management and the Board Audit Committee. At JPMorgan I owned the risk-and-control agenda for Treasury and the CIO, led **CCAR** forecast validation over a **\$2.6T** balance sheet under **SR 15-18**, and directed **Resolution & Recovery Planning** across 50+ stakeholders — the program discipline this JD calls program management.

The AI transformation half is not aspirational for me. I authored an AI governance framework referencing **NIST AI RMF** and **SR 11-7** — use-case inventory, risk tiering, explainability requirements, human-in-the-loop control design — and I built the tooling it governs: a **RAG-based workshop assistant** (Python, LangChain, SHAP/LIME explainability, prompt-injection guardrails) that cut audit cycle time **~35%**. I am also a **DBA candidate at Florida International University (expected 2028, GPA 3.81)** researching bias in expert judgment: my completed, IRB-approved study examined anchoring in auditor decisions, and my dissertation-in-development examines **automation bias in AI-assisted judgment** — precisely the human-factors risk a firm scaling AI into controls work must manage. I began my career as a state bank examiner with the Florida Office of Financial Regulation, so I have seen control environments from the supervisory side of the table.

Honest framing. My program leadership is regulatory-deadline programs (CCAR, RRP, consent orders) rather than product launches. What transfers is the part that is hard to teach: knowing what has to be true before an AI-enabled change ships in a regulated firm, and building the evidence that survives examiner challenge.

I'd welcome a conversation.

Sincerely,

Yasir A. Malik
