RESEARCH

Qualifying study: *Mitigating Anchoring Bias in Long-Term Auditor Engagements* 2026

- 55-item measurement model, 11 constructs, 16 hypotheses; instrument designed, pilot-tested and fielded under IRB approval (IRB-25-0462).
- Key finding: a research panel of 334,976 held about 20 eligible auditors (roughly 6 per 100,000), showing that specialist professionals cannot be sampled from general panels.

Manuscript in preparation: “Six in One Hundred Thousand: Why Specialist Professional Populations Cannot Be Recruited from General Research Panels”

Research interests: anchoring and automation bias in audit judgment · human–AI interaction in assurance · AI governance (NIST AI RMF, SR 26-2)

Methods: survey design · EFA/CFA · reliability analysis · regression · PLS-SEM · phenomenological design · SPSS, Jamovi, Python, Qualtrics, NVivo
