Hiring Team — Risk, Compliance & Integrity (RCI)

Google

New York, NY

Re: Content and AI Compliance Senior Program Manager (Job ID JOB_39)

Dear Hiring Team,

Building a compliance program for AI from the ground up is exactly the work I have spent the last five years doing inside two of the most heavily regulated balance sheets in the world. I am applying for the Content and AI Compliance Senior Program Manager role because the RCI charter — making compliance a competitive advantage through scaled, data-driven, policy-based programs — is the discipline I have been refining at Citi and JPMorgan, and the one I have written about as a DBA candidate researching epistemic drift in LLM-assisted judgment.

A few proof points against the role's requirements:

- **Building compliance programs from the ground up.** At Citi I designed and stood up the audit framework around our consent order — including issue validation, sustainable closure standards, and cross-functional alignment with OCC and Federal Reserve examiners. At JPMorgan I rebuilt the enterprise capital control framework across Treasury and CIO, replacing manual, reactive controls with a centralized governance model and live feedback via CORE.
- **AI-specific control frameworks.** I championed and deployed a RAG-based Workpaper Quality Assistant inside Internal Audit that cut cycle time 35% — and embedded NIST AI RMF, SR 11-7, XAI explainability, and human-in-the-loop safeguards directly into the workflow so the assistant itself was auditable. That is the same pattern Google's content and AI compliance program will need: controls that scale with the model, not around it.
- **Quantifiable program metrics and executive influence.** I have presented to enterprise audit committees, defended methodology to federal examiners, and contributed to the Fed's "not not-credible" rating on JPMorgan's resolution plan. I am comfortable translating control effectiveness into KPIs that hold up under both internal challenge and regulator scrutiny.
- **Navigating fragmented, fast-moving regulation.** My doctoral research and consulting work at *Audit the Algorithm* track NIST AI RMF, ISO 42001/23894, the EU AI Act, the Colorado AI Act, and SR 11-7 in parallel. Fragmentation is the operating environment, not a blocker.

What draws me specifically to RCI is the scope: assurance, governance, and risk under one roof at the moment AI products are reshaping every regulated surface area. I would bring 15+ years of regulator-facing program leadership, hands-on AI governance practice, and a practitioner's belief that compliance done right accelerates product velocity rather than constraining it.

I would welcome the opportunity to discuss how my background fits the team. Thank you for your consideration.

Sincerely,

Yasir A. Malik
