

FIU-DBA 7.10 — Folder Reorganization Blueprint

Target: C:\Users\yasir\OneDrive - Florida International University\FIU-DBA 7.10

Principle: nothing is deleted — unused files go to a quarantine folder you empty manually after 30 days.

The target structure ("the house")

FIU-DBA 7.10\
■

■■■ 00_READ_FIRST\ ← the top of the house: what you open daily

■ Research_Paper_FULL_DRAFT.pdf (the complete manuscript)

■ STUDY_OVERVIEW.pdf (whole study, highlights, red shortcomings)

■ OPEN_QUESTIONS_to_resolve.docx (your live to-do)

■ REVIEW_INDEX link.url (the GitHub dashboard)

■

■■■ 01_NotebookLM_Library\ ← everything you upload to NotebookLM to learn from

■ (drop the NotebookLM_Source_Pack contents here, plus course books/PDFs

■ you're reading while defining the dissertation research)

■

■■■ 02_GEB7913_Research_Project\ ← the current course, live work

■ Manuscript\ (chapter files, appendix, references)

■ Data_PRIVATE\ (Qualtrics exports, cleaned CSVs – NEVER share/upload)

■ Correspondence\ (all Dr. Rey emails, meeting confirmations)

■ Admin_IRB\ (IRB-25-0462 letters, consent forms, amendment drafts)

■ Simulated_Exercise\ (Dr. Rey's dataset when it arrives + Jamovi outputs)

■

■■■ 03_Dissertation_Pipeline\ ← where the next phase grows

■ AI_Audit_Risk_Research\ (research brief, verified sources, scholar alerts)

■ Sampling_Relaunch\ (Prolific relaunch guide, IRB amendment, screeners)

■

■■■ 04_Course_Archive\ ← completed terms/courses (read-only history)

■ (one subfolder per prior course/term, moved as-is)

■

■■■ 05_Reference_Library\ ← books, standards, methods texts (PCAOB, Hair, etc.)

■

■■■ _UNSORTED_REVIEW\ ← script puts anything it can't classify here

■■■ _TO_BE_DELETED_REVIEW\ ← obvious duplicates/superseded versions; empty manually after 30 days

The rules the script applies (safe by design)

- 1 **Dry-run first.** The script's default mode only PRINTS what it would do. You review, then re-run with -Apply.
- 2 **Move, never delete.** Suspected-obsolete files (names containing old, copy, backup, v1, superseded, ~\$ temp files) go to _TO_BE_DELETED_REVIEW, everything unrecognized to _UNSORTED_REVIEW.
- 3 **Inventory first.** Run -Inventory to produce FIU_inventory.csv listing every file. Send me that CSV and I'll tailor the rules to your actual files before you apply anything.
- 4 **OneDrive-safe:** plain Move - Item within the synced folder — history preserved by OneDrive versioning.

Daily workflow after reorg

- Morning: open 00_READ_FIRST — everything current is there.

- Learning: open NotebookLM ↔ 01_NotebookLM_Library (same sources both places).
- Working: 02_GEB7913 . . . until submission; 03_Dissertation_Pipeline after.
- Monthly: glance at _TO_BE_DELETED_REVIEW, empty it if nothing is missed.
