Hiring Team — Internal Audit, Corporate Sector

JPMorgan Chase

545 Washington Boulevard, Jersey City, NJ 07310

Re: Internal Audit Manager, Vice President — Commercial & Investment Bank Finance (Job ID 210759059)

Dear Hiring Team,

I am a candidate for the CIB Finance Audit VP role in Jersey City, and the posted coverage describes work I did in that building. From March 2015 to June 2021 I was at JPMorgan Chase — leading **CCAR** forecast validation and qualitative model challenge over a **\$2.6T** balance sheet under **SR 15-18**, owning **Basel III** RWA and capital adequacy reporting for a **\$50B** book, and directing **Resolution & Recovery Planning** across 50+ stakeholders in Legal, Treasury, and Operations into Federal Reserve and FDIC submissions. I would like to return to it.

The three preferred qualifications, against the record. The posting names capital planning (CCAR), bank regulatory reporting, and Treasury/liquidity reporting. Capital planning is the \$2.6T CCAR validation above. Bank regulatory reporting is the five years before it: as AVP of Global Legal Entity Management at Citi I centralized 500+ legal-entity data sources into governed master data and automated **FR 2900** and **TIC** filings at **99.8%** accuracy — the same "accuracy of management, legal entity and liquidity reporting" the JD asks to be audited, approached from the side that had to produce it correctly. Treasury/liquidity reporting is the Treasury & CIO risk-control mandate, where automated reconciliations cut manual review ~40%.

Leading the engagement, not only the testing. For the past five years at Citi I led audits end-to-end across 15+ business units: planning, risk and control evaluation, issue dimensioning, report drafting, and the overall opinion on the control environment. That included **regulatory issue validation** — consent-order issue-closure packages and sustainable-closure evidence submitted to quality assurance and accepted by external regulators. I have presented those conclusions to executive management and the Board Audit Committee, which is the credibility test this role's visibility implies.

Why a Finance-controls auditor should care that I build AI. I authored an AI governance framework referencing NIST AI RMF and SR 11-7, and shipped the RAG-based workpaper assistant it governs (~35% faster review, with explainability and prompt-injection guardrails). For a Finance audit team the relevance is narrow and practical: the reporting processes in scope here are reconciliation- and evidence-heavy, which is exactly where automated testing pays, and someone who has built the tooling can judge whether an automated control is trustworthy rather than merely present. My doctoral research at FIU (DBA, expected 2028, GPA 3.81) is on how expert judgment degrades when a machine answers first — the failure mode of a control that has become a checkbox.

An honest framing of the gaps. Two things are not in my record. **Broker-dealer** regulatory reporting — FOCUS, net capital, customer protection — is adjacent to my bank-side experience but not something I have audited; that is ramp, and I would rather say so now than discover it in week three. And I hold **FDIC Bank Examiner I**, not the CPA or CIA; **CIA Part 1 is in progress**, which the posting's "willingness to pursue" language anticipates. My examiner grounding is the Florida Office of Financial Regulation, where I ran CAMELS safety-and-soundness examinations alongside federal banking regulators — supervisory perspective, earned on the other side of the table.

I would welcome the conversation with the hiring manager. The attached résumé maps this experience directly against the posted responsibilities.

Sincerely,

Yasir A. Malik
