Hiring Team — Data Governance & AI Enablement

BankUnited

Miami Lakes, FL

Re: Data Governance & AI Enablement Manager (Req. 5001192331206)

Dear Hiring Team,

I am applying for the Data Governance & AI Enablement Manager role. I have governed regulatory data, written an AI governance framework and shipped an AI tool under it, and spent five years at Citi Internal Audit testing whether governance holds up. This role puts all three into one job. I am relocating to Miami and would bring that work to BankUnited.

AI governance I built and then had to live under. At Citi Internal Audit I wrote the AI governance framework proposal for audit's own use of AI, against NIST AI RMF and model-risk guidance. It covered use-case intake, risk tiering, a control library, explainability and human-in-the-loop requirements, and post-deployment monitoring. I then built and shipped a retrieval-augmented review assistant under that framework, with prompt-injection guardrails and a person reviewing every output. It cut review cycle time by about 35%. The lifecycle governance, explainability and auditability in your posting are the questions I had to answer for my own tool before anyone would rely on it.

Data governance that regulators file against. At Citi Global Legal Entity Management I consolidated 500+ legal-entity data sources into governed master data, with defined ownership, data modeling and ETL, and lineage and quality controls. That data fed the Federal Reserve FR 2900 and TIC filings at 99.8% accuracy.

Assessments and audits, from both sides. I began as a bank examiner with the Florida Office of Financial Regulation. At Citi I led risk-based audits across 15+ business units covering governance, data integrity and regulatory reporting. I drove consent-order remediation to closure, with evidence accepted by external regulators, and reported to the Board Audit Committee. At JPMorgan Chase I owned first-line controls for Treasury and CIO and worked alongside Risk, Compliance and Internal Audit. That is the partnership this role describes.

Delivery. I am a Registered Scrum Master and have run cross-functional work with 50+ stakeholders, none reporting to me, against regulatory deadlines.

I would welcome a conversation about building BankUnited's data and AI governance program.

Sincerely,

Yasir A. Malik
