PROFILE

Sets the governance standard for enterprise AI, then builds to it. Authored Citi's AI governance framework against **NIST AI RMF** and **SR 11-7**, defined the AI tooling roadmap it governed, and shipped the production retrieval system that roadmap called for. The preceding career was capital and regulatory at scale — CCAR validation over a **\$2.6T** balance sheet and Resolution & Recovery Planning into Federal Reserve and FDIC submissions — and it began as a bank examiner, so the supervisory read on a launch decision is a learned instinct rather than an acquired vocabulary. Doctoral research measures automation bias in AI-assisted judgment: over-reliance and sycophancy studied empirically, not asserted.

SELECTED RESULTS

\$2.6T	CCAR forecast validation and quantitative model challenge under SR 15-18	<i>JPMorgan Chase</i>
\$180M	Capital optimisation identified from Basel III RWA analysis across a \$50B book	<i>JPMorgan Chase</i>
~35%	Faster audit review cycle from a retrieval-augmented assistant he specified, wrote and shipped	<i>Citi</i>
99.8%	Filing accuracy on FR 2900 and TIC after consolidating 500+ legal-entity data sources	<i>Citi</i>

Internal Audit, Cross-Enterprise Program & Change Management | New York, NY

- **Authored the enterprise AI governance framework** against NIST AI RMF and SR 11-7 — use-case intake, risk tiering by criticality, control library, explainability and human-in-the-loop requirements, post-deployment monitoring KPIs — and defined the AI tooling roadmap it governed.
- **Designed, built and shipped the RAG Workpaper Quality Assistant** in Python and LangChain, with vector search, SHAP/LIME explainability and prompt-injection guardrails — specified with its users, iterated on their feedback, in production at **~35%** less review cycle time.
