JPMorganChase — Tech Risk and Controls Director, Employee Platforms

Dear Hiring Team,

I am applying for the Tech Risk and Controls Director role supporting Employee Platforms. I interviewed with the firm for Tech Risk and Controls and Control Manager positions earlier this year, and this Director-level role is a closer match to where my experience actually sits.

I spent fifteen years in audit and risk across JPMorgan Chase and Citigroup, preceded by examination work with the OCC and a state regulator. At JPMorgan Chase I owned Basel III RWA and capital adequacy reporting and led the Resolution and Recovery Planning program, coordinating more than fifty stakeholders across Federal Reserve and FDIC submissions — control environments where the reporting had to withstand supervisory challenge, not merely close on time. At Citigroup I ran thematic audits across more than fifteen business units and built the milestone, risk, and issue reporting that went to the Board Audit Committee.

The part most relevant to platform risk today is that I have built AI into a control function rather than only reviewed it: a retrieval-augmented review assistant deployed at Citi that cut review cycle time by roughly 35%, and an AI governance framework proposal referencing the NIST AI Risk Management Framework and SR 11-7. My doctoral research at Florida International University examines automation bias — how reliance on automated output changes the judgment of the people operating the control. As employee platforms absorb more automation, that becomes a live control design question rather than an academic one.

I would welcome the opportunity to discuss the role.

Sincerely, Yasir A. Malik _____ · _____
