HCM Strategy — Data Program Product Management

Goldman Sachs

200 West Street, New York, NY 10282

Re: Human Capital Management (HCM) Strategy, Data Program Product Management, Vice President

Dear Hiring Team,

I am applying for the Data Program Product Management role in HCM Strategy. I will start with what is not on my résumé, because you will find it in thirty seconds and I would rather you hear it from me.

I have not held the title of product manager, I do not know Snowflake, and I have never worked in HR. Your basic qualifications ask for a product-management track record leading data-intensive products; my record is in financial control, regulatory reporting, and internal audit. Oracle HCM Cloud, data mesh, and Jira are not on my record. If those are the binding constraints, this is a short letter and I understand.

What I do have is the hard half of a data product in a regulated firm. At Citi I consolidated **500+ legal-entity data sources** into governed master data — data modeling, ETL, ownership, and **end-to-end lineage**, with the data-quality controls that made the output certifiable. Its downstream consumers were **FR 2900 and TIC regulatory filings**, delivered at **99.8% accuracy**. I owned it after launch, not just through it. A data product whose consumer is a bank regulator teaches you quickly that lineage and quality are not documentation exercises; they are the product.

I ship, and I quantify before I build. I elicited requirements from the audit teams who needed a workpaper assistant, wrote it in Python and LangChain with vector search and explainability, integrated it with Alteryx, iterated on their feedback, and put it into production — **~35% faster review cycle**. At JPMorgan I automated capital and liquidity reconciliation pipelines for **~40% less manual review**, and analysis of Basel III RWA treatment on a \$50B book surfaced **\$180M** in capital optimization for CFO decision support. That is the business case, the ROI, and the KPI in the posting's own terms.

Matrixed delivery is the normal condition, not the exception. I ran Resolution & Recovery Planning across **50+ stakeholders** in Legal, Treasury, Operations, Controllers, and Model Risk — none of whom reported to me — into Federal Reserve and FDIC submissions against statutory deadlines. I report outcomes to executive management and to a Board Audit Committee. On your desirable list, I hold **Registered Scrum Master**.

What I would need to learn, and roughly how fast. The HCM domain and the employee lifecycle are genuinely new; I would expect a quarter before I could argue confidently about a target state. Snowflake I do not know, but it sits on data-architecture concepts I work in daily — I would be useful on governance and lineage from week one and credible on the platform specifics within a few months. I am not going to claim either is trivial.

If you are looking for a product manager who will also have to learn regulated data governance, I am the wrong shape. If the harder problem on this roadmap is lineage, quality, and defensibility in a firm where getting data wrong is a compliance event, I have done that work and can show it.

Sincerely,

Yasir A. Malik
