Faculty Recruitment — Lecturers and Adjuncts, Fall 2026

Rutgers Business School — Newark and New Brunswick

Rutgers, The State University of New Jersey

Re: Rutgers Business School, Lecturer/Adjunct (Part-Time), Fall 2026 — Posting 26FA0291

Dear Colleagues,

I am applying to teach in the Accounting and Information Systems unit, and I would be glad to be considered for Finance and Economics or Management Science and Information Systems as well. I live in Newark, a few minutes from the Washington Park campus, and I can teach in Newark, New Brunswick or Jersey City, in person or online.

What I would bring into the room is a career spent doing what the syllabus describes. I spent five years as a Vice President in Citi's Internal Audit function, leading risk-based audits across fifteen-plus business units and reporting findings to executive management and a Board Audit Committee. Before that I validated CCAR forecasts over a \$2.6 trillion balance sheet at JPMorgan Chase and ran Resolution & Recovery Planning into Federal Reserve and FDIC submissions. Before that I was a bank examiner for the Florida Office of Financial Regulation, conducting CAMELS examinations alongside federal banking regulators. When a student asks what a regulator actually does when they walk into a bank, I can answer from having been the person walking in.

I am also a doctoral candidate researching the thing your students will graduate into. My DBA at Florida International University examines anchoring bias in LLM-assisted audit judgment — how professional judgment shifts when a model supplies a confident starting point, and what a practitioner must do to show independent judgment was still exercised. It is a mixed-methods programme: a designed experiment approved under IRB-25-0462 and analysed in SPSS, now extended with a qualitative arm. I am not teaching about AI from the outside. I wrote Citi's AI control framework, and then I wrote the retrieval-augmented tool it governed in Python and LangChain and put it into production.

On teaching experience, let me be straightforward. I have not yet taught a semester-long university course. What I have done is teach professionals: I mentored eight-plus auditors at Citi in analytics-led testing and responsible AI use, and I designed and delivered the enablement that got a technical tool adopted by non-technical auditors who were sceptical of it. Persuading a room of working adults to change how they make judgments is the same problem as a graduate section, and I have the materials and the feedback to show how it went. I would welcome co-instruction or a section alongside a faculty mentor for a first term.

Courses I am prepared to teach immediately: Auditing, Internal Auditing, IT Audit and Controls, Accounting Information Systems, Governance Risk and Compliance; Commercial Bank Management, Financial Regulation and Supervision, Risk Management, Capital Markets and Capital Adequacy; Business Analytics, Data Governance, AI Governance and Responsible AI, Introduction to Python for Business; Business Ethics and Corporate Governance.

Rutgers Business School is the school in my own city, and the students in Newark are the ones I would most like to teach — many of them heading into exactly the audit, risk and compliance roles I have spent my career in, at firms twenty minutes away. I would be glad to discuss where I could be most useful this term.

Sincerely,

Yasir A. Malik
